

WriteFreely

WriteFreely is an open source platform designed to simplify your writing experience. This software is built around helping you focus on your writing, and you will experience that as soon as you start using WriteFreely for the first time. It is the ideal solution to build a minimal blog, which is not focused around news feeds, notifications, likes and claps, but entirely on the content, on what you create. You can reach outside your own site with federation via ActivityPub. WriteFreely lets anyone on Mastodon, Pleroma, or any ActivityPub-enabled service follow your blog, bookmark your posts, and share them with their followers.

Note: at Cloud68.co we do NOT develop this software and all the names and trademarks of the software are owned by the entity behind the project.
